

Contract for Interactive Front-End Customer Customizer

Client: Fossil Tattoo in Fruita, CO

Student Programmers: Jeff Ross, Shawn Gerging, Kiersten Ridgel

Project: Interactive Front-End Customer Customizer

The Student Programmers propose to make an Interactive Front-End Customer Customizer for Fossil Tattoo with the following understandings:

What the Student Programmers propose to make and/or do:

We will construct an application for an iOS tablet system for Fossil Tattoo's shop. It will have an interactive first consultation questionnaire for incoming clients, the ability to send and receive picture examples and samples of requested tattoo designs between tablets, as well as email possibility to both the artist and client of the compiled questionnaire and samples. This will include a FaceTime or equivalent customer-to-artist service.

What the Student Programmers need from Fossil Tattoo to accomplish this task:

Fossil Tattoo agrees to provide at least two iOS tablets for programming and testing, and initial implementation of said project. Follow-up and product review meetings will be held approximately every three weeks between the programmers and Fossil Tattoo to ensure the project is accurately addressing the needs of Fossil Tattoo.

In the event of changes to requirements:

If at any time Fossil Tattoo wishes to change, exempt, or add to the project functionality requirements, they will notify the programmers as soon as possible. If need be, an additional review meeting may be scheduled to ensure that the changes are understood and agreed to as plausible in the given time frame and with the given materials. No additional functionality requirements may be added after November 18, 2016 to allow the programmers to finish the project as much as possible. Should the programmers feel that any functionality requirement is unfeasible to the project's timely completion, an additional meeting may be scheduled to suggest alternatives.

Expected compensation to the Student Programmers:

Fossil Tattoo understands that this is a student project, and therefore part of the student programmers' grades for the semester class. Therefore they agree to complete

the client survey and grading procedure at the termination of the project in a timely manner on all student programmers' performance. No monetary or other compensation is expected.

Limitations to the Project:

We are a student team and this is a student project. This project comes with no particular guarantees, including in particular warranty or suitability for a particular purpose, or long-term support.
